Function description SPEEDY basic –

Positioning and clamping in one function

**Releasing:**
- The release pressure (1) is applied to the piston (2) and the piston moves up. The springs (3) are compressed.
- The balls (4) move to the parking position.
- The retractable nipple (5) is released.

**Mechanically clamping:**
- The pressure is relieved and drops to 0 bar.
- The spring pre-load is applied via the piston (2), the piston moves down.
- The balls (4) are pressed in by the piston (2) and enclose the retractable nipple.
- The retractable nipple is securely clamped by the spring pre-load.
Tried and tested technology with a system –  
Original down to the smallest detail

Advantages that pay off!

Design

- Compact design with high clamping forces
- Low installation depth
- Modular design
- Simple installation contour
- Easy to clean
- Easy to maintain – straightforward to replace
- Made of high-quality, stainless tool steel
- Can be actuated hydraulically or pneumatically
- Piston seal on inside

Space-saving, also on pallet side

- The retractable nipple basic can be mounted straightforwardly
- Extremely space-saving installation shape (on the basic S the retractable nipple protrudes only 15.5 mm)
- Easy handling of pallets due to short extraction distances

Lifting out/off at an angle

- Workpiece, jig and pallet change without tilting – particularly important with asymmetrical weight distribution on the pallet

Exact position up to the maximum load

- The spring force constantly fixes the retractable nipple positively and precisely
- No bending or lifting off
- Vibrations are damped, the quality of the surfaces to be machined increases and the lives of the tools increase

Intelligent blow-out technology

- Particularly effective cleaning due to the extending nozzle
- Is suitable for partial automation and reduces the cleaning effort

For data sheets and 3D data see www.VSIQLIPHYWE.com

#### Note:

- Spacing tolerance: ±0.01 mm for SPEEDY and retractable nipple
- Fit overpressure safety valve

1) **Retention force**
   - The retention force refers to the max. load at which the nipple will continue to be retained.

2) **Radial pre-positioning**
   - The loading device must have play in the case of automated handling.

3) **Repeatability**
   - Repeatability generally refers to the accuracy with which the same pallet is positioned on changing with the same interface.
Tilting torque calculation example

Profit from our expertise

Example:
Fast closing clamp plate 4 SPEEDY basic Mh with spacing 200 x 200 and max. feed force of 10 kN with distance of 300 mm.

Question:
Due to the predominance of roughing work, the system is to be checked for a double safety factor. Are the number of fast closing clamps and the spacing selected adequate?

Solution:

\[ M_H > 2 \times M_V ? \]

\[ M_V = F_V \times L_V = 10'000 \text{ N} \times 0.3 \text{ m} \]
\[ M_V = 3'000 \text{ Nm} \]
\[ M_H = 2 \times (F_H \times L_1) + 2 \times (F_H \times L_2) \]
\[ L_1 = \frac{\text{ØD}}{2} \]
\[ L_2 = \frac{\text{ØD}}{2} + \text{Spacing} = 0.256 \text{ m} \]
\[ L_1 + L_2 = \frac{\text{ØD}}{2} + \text{Spacing} = 0.312 \text{ m} \]
\[ L_1 + L_2 = 0.112 \text{ m} + 0.20 \text{ m} = 0.312 \text{ m} \]
\[ M_H = 2 \times F_H \times (L_1 + L_2) = 2 \times 10'000 \text{ N} \times 0.312 \text{ m} \]
\[ M_H = 6'240 \text{ Nm} \]

\[ M_H / M_V > 2 ? \]
\[ M_H / M_V = 6'240 \text{ Nm} / 3'000 \text{ Nm} \]
\[ M_H / M_V = 2.08 > 2 \]

With this design there is a safety factor of around two.

(Enter all variables in SI units (metres, newtons))
Zero point clamping system

SPEEDY basic Y

- Module
- Round
- Pneumatically actuated

Characteristics:
Flush Mount fast closing clamp module made of high-quality, stainless tool steel.
Due to the low height, little space is required.
Is clamped mechanically and released pneumatically.

Application:
For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

Machine element:
Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

Retractable nipple key SPEEDY basic Y

Characteristics:
Retractable nipple key for the secure installation of SPEEDY basic Y.

Order no. | Across flats | Tightening torque | Weight |

SPEEDY basic S with blow-out function

**Module**
- Round
- Hydraulically actuated
- Blow-out function

**Characteristics:**
Flush Mount fast closing clamp module made of high-quality, stainless tool steel. Due to the low height, little space is required. Is clamped mechanically and released hydraulically. Intelligent blow-out function for cleaning the precision bore. Mount control via differential pressure or blocking air possible.

**Application:**
For partial automation, reduces the cleaning effort. For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

**Machine element:**
Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

Zero point clamping system

SPEEDY basic S®

- Module
- Round
- Pneumatically actuated

**Characteristics:**
Flush Mount fast closing clamp module made of high-quality, stainless tool steel. Due to the low height, little space is required. Is clamped mechanically and released pneumatically.

**Application:**
For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

**Machine element:**
Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

---

**SPEEDY basic S® with blow-out function**

- Module
- Round
- Pneumatically actuated
- Blow-out function

**Characteristics:**
Flush Mount fast closing clamp module made of high-quality, stainless tool steel. Intelligent blow-out function for cleaning the precision bore. Mount control via differential pressure or blocking air possible.

**Application:**
For partial automation, reduces the cleaning effort. For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

**Machine element:**
Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

One thing is certain – the fixed zero point with SPEEDY retractable nipples

1) Retractable nipple with zero point

2) Retractable nipple with equaliser

3) Retractable nipple

Retractable nipple with zero point in the middle of the pallet

Application:
Equalisation of thermal expansion
Manufacturing tolerances = position tolerances for fast closing clamps and retractable nipples, each 0.01 mm

Retractable nipple with zero point at the top left corner of the pallet

Application:
Equalisation of thermal expansion and manufacturing tolerances
Zero point clamping system

SPEEDY basic M

- Module
- Round
- Hydraulically actuated

**Characteristics:**
Flush Mount fast closing clamp module made of high-quality, stainless tool steel.
Due to the low height, little space is required.
Is clamped mechanically and released hydraulically.

**Application:**
For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

**Machine element:**
Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

---

1) Counterbore for screw DIN 912

For information on the retractable nipple fastening variants see page 19.
Retractable nipple fastening variants

The fastening variants shown are possible for SPEEDY basic S, M and L.

**Variant A:**
For applications in which nipple bores are not allowed on the surface of the pallet, or for direct workpiece clamping.

**Variant B:**
Simple nipple fastening from above, if particular accuracy between the position of the nipple and the upper side of the pallet is not necessary.

**Variant C:**
Ideal fastening variant for clamping arrangements using which the workpiece is machined on both sides. Highest accuracy is ensured because the nipples are fastened in the same mounting bore.

**Variant D, E:**
These fastening variants are to be preferred. The precision bore for the nipple and all the necessary positioning holes on the pallet can be manufactured in one operation. As a consequence the positions have the highest accuracy in relation to each other.

Nipple fastening D

**Characteristics:**
Makes it possible to manufacture the nipple fastening with one clamping arrangement. In this way the highest accuracy is achieved.

**Application:**
Machine pallets, machine vices, chucks, jigs, direct workpiece clamping.

Possible applications

Pallets with retractable nipples are available in different versions complete with means of clamping the work-piece. Please request information from your STARK sales partner.
Accessory
Pressure booster RECORD

Characteristics:
The pressure booster RECORD converts air pressure to the hydraulic system pressure required to operate the SPEEDYs.

Application:
Operation of:
- 50 SPEEDY basic S
- 20 SPEEDY basic M
- 10 SPEEDY basic L

<table>
<thead>

Hydraulic connection via hydraulic coupler 804 371 (use coupling 952 044 on hose), hydraulic hose not included.

Hydraulic hose with couplings

Characteristics:
Hydraulic hose with hydraulic couplers at both ends (952 044 and 952 177 self-sealing).

Application:
Used to connect between pressure booster and fast closing clamp plate or SPEEDY basic.

<table>
<thead>
<tr>

Self-sealing coupler

Characteristics:
- SPEEDY side
- Self-sealing

Application:
Particularly recommendable for use in conjunction with pressure boosters (it is not necessary to top-up the pressure booster).

Can be used wherever oil is not allowed to leak into the drilling emulsion and for frequent coupling processes.

Everything from a single source

Development
Machine technology has continued to develop strongly. STARK offers systems for modern manufacturing, from simple versions to complex, clamping solutions suitable for automation. In this way STARK facilitates sustainable growth and potential for your business. At STARK it is tradition to take new paths, e.g. the expansion of the SPEEDY hydratec programme with a new type of electrical drive as an alternative to hydraulic and pneumatic operation.

Design
The modern design department, equipped with CAD since 1988, prepares individual, optimised solutions for customers. Continuous innovation and improvement of existing products and solutions for positioning and clamping safeguard the market position over the long term. STARK also has its own test facility for the practical verification of the parameters determined theoretically. During this process, e.g., endurance tests are undertaken under production conditions (coolant, swarf).

Production
STARK stands for meticulous manufacture in-house with high requirements on quality and precision. The specialist knowledge of our employees and the high level of vertical integration are prerequisites for the ability to react flexibly to customer wishes. STARK continuously invests in the latest technologies to pass this lead onto our customers. Here the focus is on the highest possible quality and the best possible adherence to schedule.

Placing in operation and service
With the delivery of STARK products we offer other services along with placing in operation on your premises. This could be a predefined acceptance that could take place, e.g., at the machine manufacturer, or a staff training course for the safe and efficient usage of your STARK zero point clamping system. STARK service is also available after placing in operation.
